Why Thought Leaders?

Thought Leaders expert consultants work with you to review existing IT systems and business needs and to determine the most innovative and cost-effective approach to modernize systems. The process might include extracting more value from existing systems, evolving legacy systems, changing technology platforms or adding new applications.

We use proven planning, assessment and straightforward migration paradigms with Pegasystems, including enterprise architecture (EA), service-oriented and event-driven architectures, and business process management (BPM) solutions that have worked well with many other organizations to simplify legacy modernization.

Thought Leaders provides dependable outcomes by listening well and working alongside your team to generate results using thoughtful plans and firm program management disciplines. As we help you transform your technology to support current and future business growth, we work to reduce your overall IT costs, make your application portfolios more manageable and limit business disruption.

~ Legacy transformation services

This service will allow your organization to enhance existing application functionality, making applications easier to maintain and part of a highly scalable framework.

We provide a methodical and incremental approach for each customer to optimize and modernize legacy applications through an evolution to service-oriented architecture, Web front-ends and/or system replacements.

~ Re-platform services

This service allows moving applications to newer, less expensive and more efficient technology platform.

~ Migration services

This service lets you migrate to a standards-based environment in a manner that delivers maximum benefits while minimizing disruption to the business by using an intermediary
